Comfort Pet Products is doing their part for the environment

- We use only 100% recycled fiber for our pillows and all other fiber filled products
- We are one of the first in the pet industry to use Soy-Based Polyurethane Foams
- The water based adhesives we use to glue foam is a environmentally friendly
- 90% of our shipping boxes are made with recycled paper
- 100% of our pallets are recycled

Earth Friendly Solutions:

By using only 100% recycled fiber to fill our beds, we have taken millions of plastic bottles out of the worlds land fills. This reduces the need to manufacture new fiber, lowering harmful greenhouse gases and reduces the need to use up more of our precious natural resources.

The Soy-Based foam we are currently using is made with approximately 20% fewer petroleum based products. Manufacturing foam with Soy-Based Polyol requires 61% less non-renewable energy. Soy-Based Polyol produces 36% less harmful emissions into the ozone.

Our water based foam adhesive is the safest adhesive in the market. It has zero VOC's and it's formaldehyde free. They use food coloring in the products instead of harmful dyes. This is a non-toxic product for your pets safety.

Using recycling cardboard reduces the need to cut down trees, fill landfills and making new products out of recycled ones reduces the amount of energy needed in production.

We only ship our products on recycled wood pallets, saving more trees and energy.
